

## Making your pool deck stylish again

**LUXAPOOL Poolside & Paving** is a water-based, rubberised, non-slip coating that is easy to apply and provides a safe and durable decorative surface for most small pebble, concrete and paved areas. It may be easily varied during application to a range of non slip effects.

Areas where **LUXAPOOL Poolside & Paving** can be used include:

- ✓ Pool surrounds
- ✓ Decks and patios
- ✓ Balconies
- ✓ Boat decks, pontoons
- ✓ Wharf and landing dock surfaces
- ✓ Steps, stairs and walkways

**LUXAPOOL Poolside & Paving** is available in a range of 15 stylish colours and will adhere to most mineral surfaces including, pebblecrete, aged concrete, sandstone, cement render, masonry, fibre-cement sheet and unglazed or surface ground glazed tiling.

Use of a specialty primer is mandatory as the first coat of a systems approach to ensure maximum adhesion to such surfaces. A clear glaze is also available for improved stain resistance and easier maintenance.

## Colormaker Industries

*Quality Coatings through research and innovation*

With over 50 years of manufacturing experience, Colormaker Industries, an Australian owned company, is at the forefront of the coatings industry. The success of Colormaker is founded on dedication and commitment to developing industry leading products through extensive research and development.

## Durable rubberised non-slip surface coating

**Luxa  
pool**  
Poolside & Paving

**Luxa  
pool**  
Poolside & Paving

# Typical application:

For pebblecrete surface pool coving/surrounds

## Preparation

Surfaces must be stable, clean and dry.

## You Will Need\*

### Priming:

3 - 4 litres of **ACRYLMERIC Superseal Primer**.  
Application tools: 100mm brush, and/or medium nap (12mm) roller.

### Fill Coat /Topcoat:

15 - 25 litres of **LUXAPOOL Poolside & Paving**.  
Application tools: 250-300mm Spreader Blade / Plastic Trowel, 270mm medium nap (12mm) roller.

### Unicryl HD Clear Glaze:

2 - 4 litres of **Unicryl HD Clear Glaze**. Application tool: medium nap (12mm) roller.

## Number of coats

2 coats of **LUXAPOOL Poolside & Paving** are recommended, one coat as base coat and one coat as textured topcoat. The texture of this final coat can be customised using special rollers.\*\*

## Drying Time (@ 25°C, 50% R.H.)

Minimum 4 hours dry for **Superseal Primer**.  
8 hours minimum dry for **LUXAPOOL Poolside & Paving** basecoat, and 24 hours dry for topcoat before subjecting to light traffic. 72 hours minimum is required for full cure. **Unicryl HD Clear Glaze** may be applied following 24 hours dry of the textured topcoat. Allow minimum 24 hours dry before placement of outdoor furniture etc, on the coated surface.

NOTE: Do not apply **LUXAPOOL Poolside & Paving** or **Unicryl HD Clear Glaze** below 15°C, or when rain is forecast within 24 hours. For application during winter months (May-August) refer to the manufacturer for specific systems advice.

\*Quantities sufficient for a typical domestic pool (approx. 10m x 5m x 0.5m coving)

\*\*Refer to the manufacturer for additional advice for texture customised rollers.

## Clean Up

Clean equipment used with **Superseal Primer** with appropriate thinners. All other equipment should be cleaned with water immediately after use.

## Tips

Cure new concrete for at least 28 days, then acid etch and neutralise before coating. Surfaces must then be primed with **ACRYLMERIC Superseal Primer** at 4-5m<sup>2</sup>/L to ensure maximum adhesion. Allow to dry min. 4 hours @ 25°C.

For additional information including technical data sheets and detailed application procedures refer to the manufacturers website at [www.luxapool.com.au](http://www.luxapool.com.au).

## Innovation

An innovative concept in decoration and maintenance for poolside and exterior surfaces.

- ✓ Water based
- ✓ Environmentally friendly
- ✓ Non-slip safe surface
- ✓ Ready to use from container
- ✓ UV resistant, tough and durable
- ✓ Excellent adhesion to a wide range of exterior surfaces
